# 1. Introduction

This document outlines the Software Requirements Specification (SRS) for StockGenus, a web application aims to automate and streamline various store operations, ultimately enhancing efficiency and store management.

## 1.1. Purpose

The primary purpose of this application is to automate and streamline various store operations . This will address current challenges in areas like inventory management and items processing, ultimately improving efficiency and customer service. The application will offer functionalities such as product management, real-time inventory tracking, transactions management, and customer data management.

## 1.2. Scope

The StockGenus application will provide a robust set of features , The system will accommodate different user roles, including administrators, inventory agents, storekeepers and suppliers.

Key functionalities will include:

- User Authentication : the user can register to the system , log in and logout .
- Product Management: list products in store , create search and delete a product .

Additional functionalities may be incorporated as the project progresses.

The system will be designed to be user-friendly .

## 1.3. Definitions And Abbreviations

### 1.3.1. Definitions

- **Software Requirements Specifications:** a document that describes what will the product do and how it is expected to perform.

- **Use Case Diagram:** a visual representation of how users will interact with a system, showing the relationship between actors (users) and use cases (system functions).

### 1.3.2. Abbreviations

- **SRS:** Software Requirements Specifications.
- **IEEE:** Institute for Electrical and Electronics Engineers Academic Science Electronics.
- **UC:** Use case.

## 1.4. References

- IEEE Recommended Practice for Software Requirements Specifications.
- Best Guide on Software Requirements Specification 2023 by Zainab Aftab.
- How to Write a Software Requirements Specification (SRS Document) By Gerhard Krüger and Charles Lane.

## 1.5. Overview

This document is written following the IEEE Std 830-1998 document, it is organized as follows:

- **Section 1:** Introduces the document and presents the platform **StockGenus**.
- **Section 2:** Gives an Overall description of the platform **StockGenus**.
- **Section 3:** Describes the specific requirements, divided into external interfaces, functional requirements and non-functional requirements.

## 1.6. Description :

The stock management system is designed to provide a robust and efficient solution for inventory management, aiming to reduce customer complaints and inventory costs. It involves four main actors: the administrator, inventory manager, store manager, and supplier, each with specific roles such as authentication, inventory updates, and order processing. Key features include user authentication, item management (adding, removing, replacing), order placement, invoice and receipt generation, item search, price updates, and summary report generation, all aimed at automating and improving inventory management.

## 1.7. User Characteristics

To ensure customer satisfaction, prevent conflicts, and maintain security, **StockGenus** categorizes its users into distinct roles, each with corresponding access permissions. This systematic approach ensures that each role has appropriate access to system functionalities and information, while also upholding necessary security measures.

The identification process of actors results in the designation of the following roles:

### 1.7.1. Administrator

The administrator authenticates users registered in the system and performs crucial inventory modifications, such as updating prices and removing expired items.

### 1.7.2. Inventory Manager

The inventory manager handles the inventory, associated items, and transactions within the inventory, ensuring efficient and accurate stock management.

### 1.7.3. Store Manager

The store manager efficiently manages stored items brought in by suppliers and ships them when requested, ensuring optimal stock management.

#### 1.7.4. Supplier

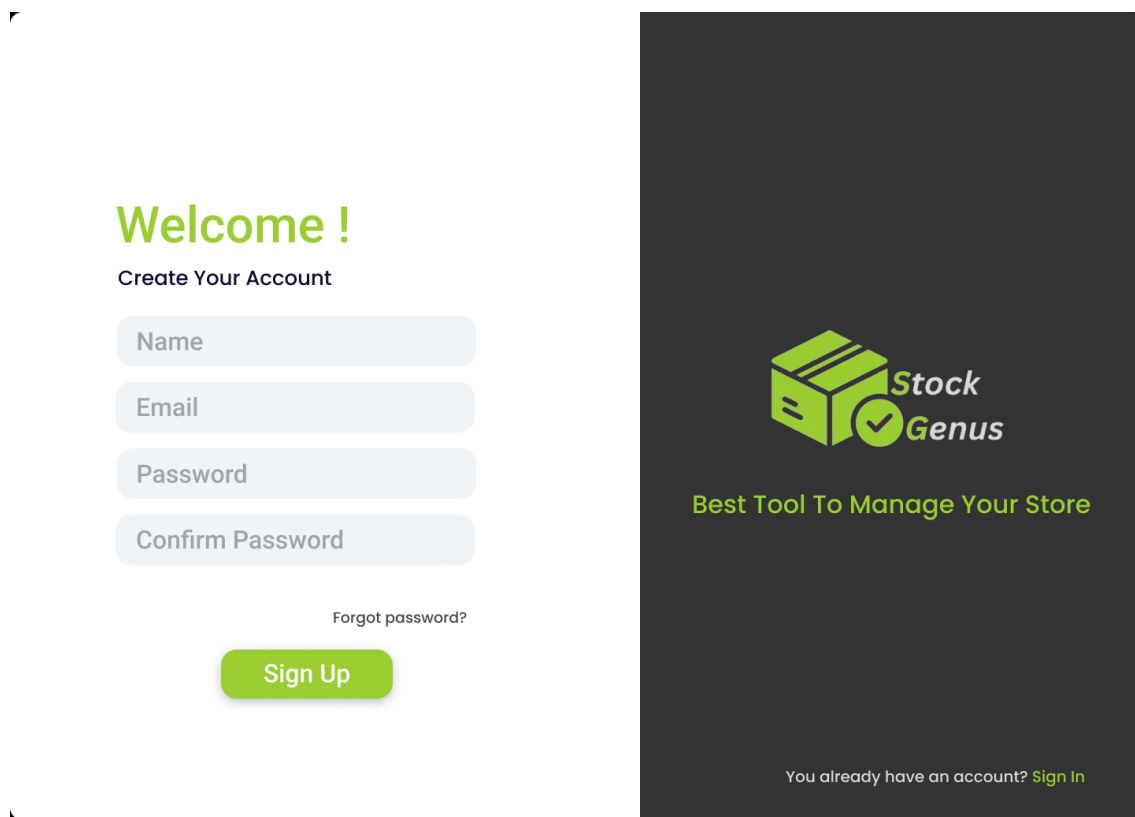

The supplier provides the items requested by the store, responding to orders placed at regular intervals, ensuring a constant supply of stock.

## 2. Specification Of Requirements

### 2.1. App interfaces

#### register Interface

This interface permit the user to register in the app .

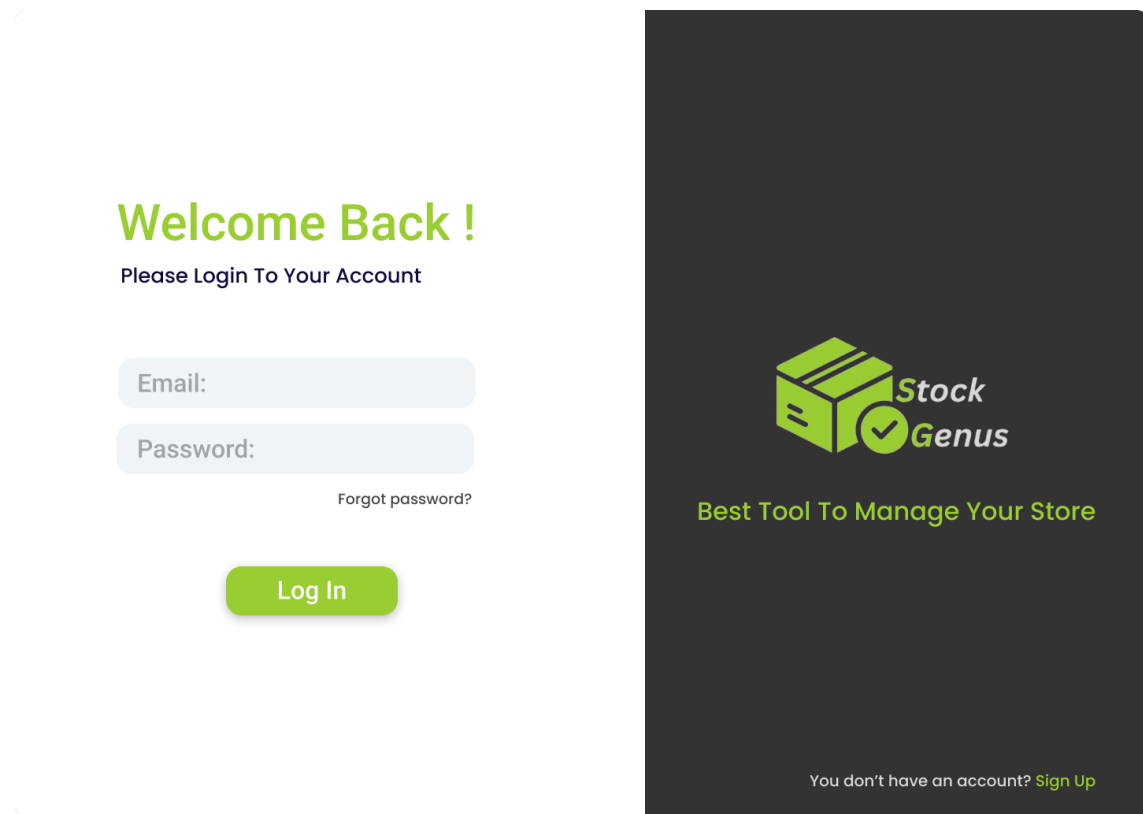

The image displays a user registration interface. On the left, a light gray card contains the heading "Welcome !" in green, followed by the subheading "Create Your Account". Below this are four input fields: "Name", "Email", "Password", and "Confirm Password". A "Forgot password?" link is positioned below the "Password" field. A green "Sign Up" button is at the bottom of the card. On the right, a dark gray card features the "Stock Genus" logo (a green box with a checkmark) and the text "Best Tool To Manage Your Store" in green. At the bottom of this card, it says "You already have an account? Sign In" with "Sign In" in green.

Figure 1: Register Interface

## Log In Interface

This interface permit the user to log in to his account .

The image displays a login interface on a light gray background. On the left, a white card contains the text "Welcome Back !" in bold black font, followed by "Please Login To Your Account" in a smaller black font. Below this are two input fields: "Email:" and "Password:", both with light gray borders. A link "Forgot password?" is positioned below the password field. A blue "Log In" button is at the bottom of the card. On the right, a dark gray card features the "Stock Genus" logo, which consists of a blue cube and a green checkmark. Below the logo, the text "Best Tool To Manage Your Store" is written in blue. At the bottom of this card, a link "You don't have an account? Sign Up" is displayed in blue.

Figure 2: Login Interface

## List Products Interface

This interface shows the store's products

Figure 3: Products Interface

## Add product Interface

This interface permit inventory manager to add a product to the store .

The screenshot displays the 'Add Article' modal in the Stock Genus application. The modal is centered and contains the following elements:

- Title:** Add Article
- Name:** A text input field.
- Description:** A larger text input field.
- Quantity:** A text input field.
- Validate:** A green button to submit the form.
- Agouter Article:** A green button at the bottom to return to the article list.

In the background, a table lists existing articles:

Id	Name	Quantity	
0	Article1		Delete
1	Article2		Delete
2	Article3		Delete

Figure 4: add product Interface

## Show product Interface

This interface permit to see the details of a product .

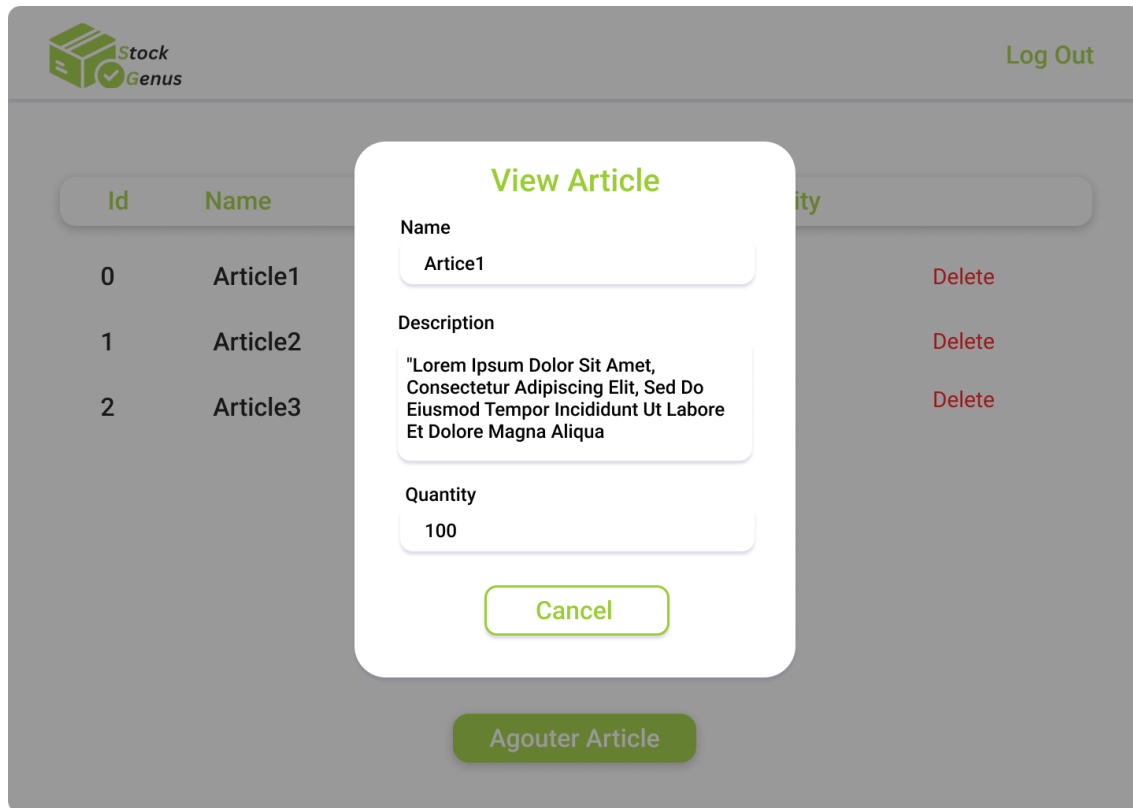

Figure 5: view product Interface

# Delete product Interface

This interface permit to delete a specific product from the store .

Figure 6: delete product Interface

## 2.2. Functional Requirements

Functional requirements represent the actions that the system must perform, it does not becomes operational only if it satisfies them. The application to be carried out must cover mainly the functional needs which are cited below.

### 2.2.1. Authentication

UseCase:

Figure 7: Authentication Use-Case Diagram

Table 1: Register

<b>Use Case Name</b>	Register
<b>Description</b>	Allows a new user to create an account in the system.
<b>Entries</b>	User details (name, email, password, etc.)
<b>Source</b>	User
<b>Sorties</b>	Account creation confirmation, Welcome message
<b>Destination</b>	User database, User interface confirmation message
<b>Required Actions</b>	Validate user details, Save user information to the database
<b>Preconditions</b>	User is not already registered
<b>Postconditions</b>	New user account is created, User sees a confirmation message
<b>Effet de Bord</b>	Initialization of user settings, Possible verification email sent

Table 2: Log In

<b>Use Case Name</b>	Log In
<b>Description</b>	Allows an existing user to log into the system.
<b>Entries</b>	Username, Password
<b>Source</b>	User
<b>Sorties</b>	Authentication status (success or failure), User role
<b>Destination</b>	System dashboard, Error message
<b>Required Actions</b>	Verify user credentials, Load user profile and role
<b>Preconditions</b>	User has a valid account
<b>Postconditions</b>	User is logged into the system or receives an error message
<b>Effet de Bord</b>	Session initialization, Access rights assignment

## 2.2.2. Product Managemenet

### UseCase:

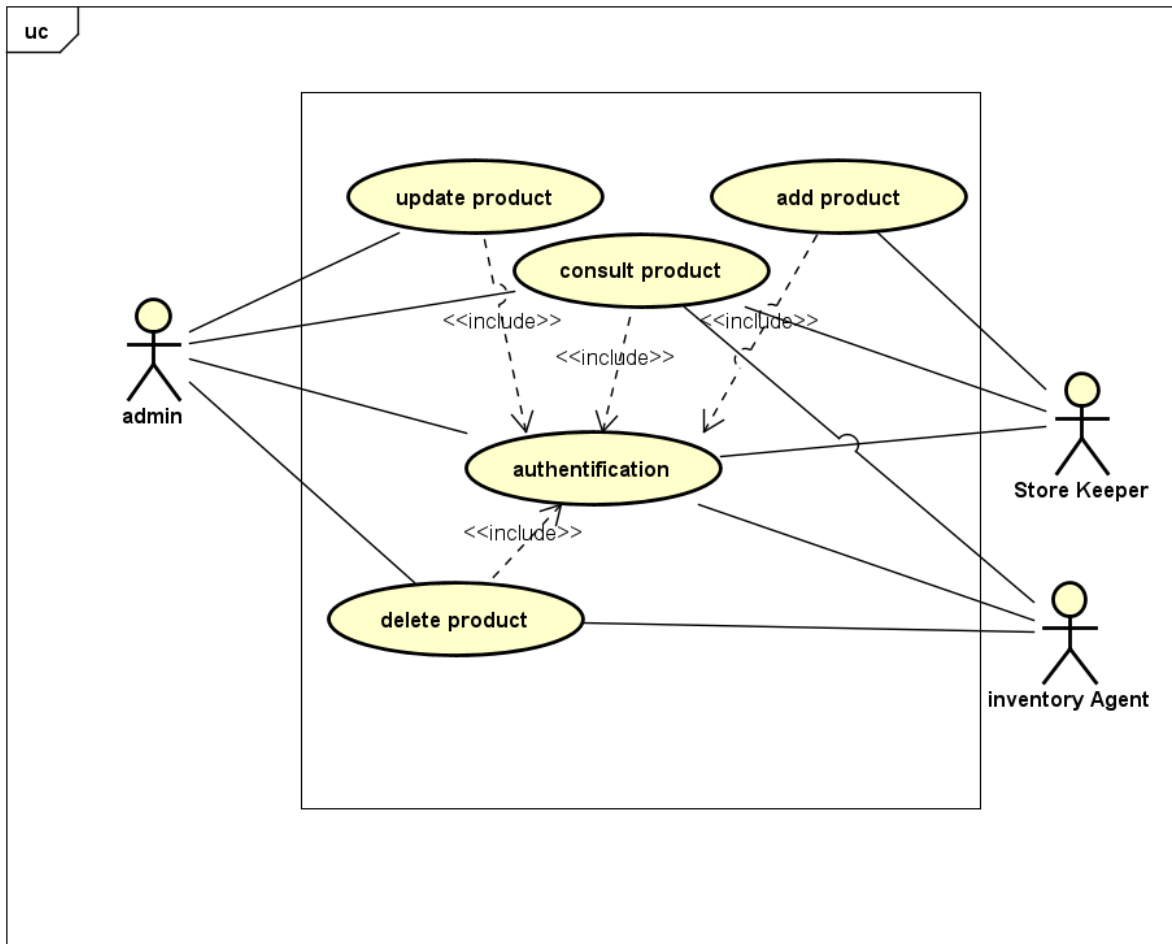

Figure 8: product Managment Use-Case Diagram

Table 3: Authentication

<b>Use Case Name</b>	Authentication
<b>Description</b>	Allows users (admin, store keeper, inventory agent) to log into the system.
<b>Entries</b>	Username, Password
<b>Source</b>	User (admin, store keeper, inventory agent)
<b>Sorties</b>	Authentication status (success or failure), User role
<b>Destination</b>	System dashboard, Error message
<b>Required Actions</b>	Verify user credentials, Load user profile and role
<b>Preconditions</b>	User has a valid account
<b>Postconditions</b>	User is logged into the system or receives an error message
<b>Effet de Bord</b>	Session initialization, Access rights assignment

Table 4: Add Product

<b>Use Case Name</b>	Add Product
<b>Description</b>	Allows authenticated users to add new products to the inventory.
<b>Entries</b>	Product details (name, category, price, quantity, etc.)
<b>Source</b>	User (admin, store keeper, inventory agent)
<b>Sorties</b>	Confirmation of product addition, Updated inventory list
<b>Destination</b>	Inventory database, User interface confirmation message
<b>Required Actions</b>	Validate product details, Save product to the database
<b>Preconditions</b>	User is authenticated and has the necessary permissions
<b>Postconditions</b>	Product is added to the inventory, User sees a confirmation message
<b>Effet de Bord</b>	Inventory count update, Possible reordering trigger if stock levels are low

Table 5: Update Product

<b>Use Case Name</b>	Update Product
<b>Description</b>	Allows authenticated users to update details of existing products in the inventory
<b>Entries</b>	Product ID, Updated product details (name, category, price, quantity, etc.)
<b>Source</b>	User (admin, store keeper, inventory agent)
<b>Sorties</b>	Confirmation of product update, Updated inventory list
<b>Destination</b>	Inventory database, User interface confirmation message
<b>Required Actions</b>	Validate updated details, Save changes to the database
<b>Preconditions</b>	User is authenticated, Product exists in the inventory
<b>Postconditions</b>	Product details are updated in the inventory, User sees a confirmation message
<b>Effet de Bord</b>	Inventory count and product details update, Possible notification to relevant parties

Table 6: Consult Product

<b>Use Case Name</b>	Consult Product
<b>Description</b>	Allows authenticated users to view details of products in the inventory.
<b>Entries</b>	Search criteria (product ID, name, category, etc.)
<b>Source</b>	User (admin, store keeper, inventory agent)
<b>Sorties</b>	Product details matching the search criteria
<b>Destination</b>	User interface displaying product details
<b>Required Actions</b>	Validate search criteria, Retrieve product details from the database
<b>Preconditions</b>	User is authenticated, Product exists in the inventory
<b>Postconditions</b>	Product details are displayed to the user
<b>Effet de Bord</b>	None

Table 7: Delete Product

<b>Use Case Name</b>	Delete Product
<b>Description</b>	Allows authenticated users to remove products from the inventory.
<b>Entries</b>	Product ID
<b>Source</b>	User (admin, store keeper, inventory agent)
<b>Sorties</b>	Confirmation of product deletion, Updated inventory list
<b>Destination</b>	Inventory database, User interface confirmation message
<b>Required Actions</b>	Verify product exists, Remove product from the database
<b>Preconditions</b>	User is authenticated, Product exists in the inventory
<b>Postconditions</b>	Product is removed from the inventory, User sees a confirmation message
<b>Effet de Bord</b>	Inventory count update, Possible notification to relevant parties

## 3. Non-functional requirements

A non-functional need is a need that specifies the properties of the system such as constraints related to the environment and implementation.

Therefore, our website must meet the following requirements :

### 3.1. Security Requirements

- Access to information is only possible after verification of access rights and privileges.

### 3.2. Performance requirements

- The website must be efficient, that is to say, through its functionalities, meets all the requirements in an optimal manner.

### 3.3. Reliability requirements

- The website must work consistently without errors and must be satisfactory.

### 3.4. Accessibility Requirements

- Multiple users can use our system simultaneously.
